

MORT Y. ONMAZ

GAME PROGRAMMER

Experience

- GAME PROGRAMMER**
BattleForged Game Studio, Haarlem | 2025 - Present
 - Identified and optimized memory usage by roughly 70% within the project.
 - Created internal wiki guides on industry-proven designs and patterns (e.g. Observer, Component, Factory) to ensure scalability and maintainability across the project, as well as version control usage instructions for colleagues and interns.
 - Reviewed pull requests, as well as optimizing and streamlining the review process to maximize efficiency and cut down wasted time.
 - Developed a character state system to maintain flags and status effects with flexible lookup methods.
 - Developed a modular NPC AI foundation with dynamic environment queries.
 - Developed a dynamic archery mechanic inspired by M&B Bannerlord and Skyrim.
 - Developed a combat combo system supporting chained attacks with dynamic follow-up animations.
 - Developed a souls-like target locking system with distinct softlock and hardlock modes, including locational locking ability.
- GAMEPLAY PROGRAMMER**
LaserMaxx, Bilthoven | 2021 - 2022

I have worked both on software and hardware aspects of laser gaming sets used worldwide in laser gaming venues. I was responsible for developing games for propriety hardware as well as troubleshooting and assembly of it.
- GAMEPLAY PROGRAMMER**
XR Labs, Hilversum | 2021 - 2021

I worked as an intern on various Unreal Engine & Unity projects, developing proof-of-concept projects for other companies, where I've also been chosen as project lead based on level of experience. This internship was part of my studies at GLU.

Education

- GAME DEVELOPER - BACHELOR**
Howest Digital Arts & Entertainment, Kortrijk | 2022 - 2024

DAE allowed me to delve deeper into everything I had learnt at GLU. Rather than being restricted to existing game engines, I was designing and building my own. I've made games from the ground up, using my own frameworks and libraries.

Personal information

- Residence**
Woerden, Netherlands
- Nationality**
Dutch

Skills

Programming Languages

- C++
- C#
- Java
- SQL
- PHP

Game Engines

- Unity Engine
- Unreal Engine
- GODOT

Source Control

- Git
- Perforce

Frameworks/Libraries

- OpenGL
- SDL
- WPF

Tools

- Photoshop
- Maya 3D
- Blender

Workflow

- AGILE/SCRUM

Languages

- English**
Native
- Dutch**
Fluent
- Turkish**
Fluent

● **GAME DEVELOPER - MBO**

Grafisch Lyceum, Utrecht | 2018 - 2022

My first foray into the world of C# and game development. Learning about scripting, game design, SCRUM, S.O.L.I.D. principles and Object Oriented Programming. I've worked in a very practical learning environment; tasked with making a game in both solo & group projects 4 times a year. This instilled in me a burning desire to improve myself as a programmer who loves making polished games.

● **I.T. - MBO**

ID College, Gouda | 2015 - 2016

A middle vocational study on computer hardware, servers & software.
